- ☐ Course Content moved to:
<https://dberleant.github.io/IFSC3300/>
- ☐ Objects vs. Arrays
`let diner = {main: 'pizza', side: 'salad w ranch', ...}`
`let items = ['pizza', 'salad w ranch', ...]`
curly braces {}, denote objects
square braces [] denote arrays
- ☐ Object and function definitions are recursive.
Objects can have subobjects, ad infinitum.
Functions can have subfunctions, ad infinitum.
- ☐ Numerical Base Conversion Unproven Assertions:
Conversion from higher to lower base is divisive.
Conversion from lower to higher base is multiplicative.
Direction Matters, Least Significant Digit to Most S. D.
and vice versa.
- ☐ Resolution of a Minor Question:
Convert from a higher base to a lower base
starting at the lower order digit.
I assert that non-uniqueness rears its ugly head.
- ☐ Times and Dates in JS are measured in
milliseconds since January 1, 1970.

The beginning of the new digital age...
- ☐ `getMilliseconds()` makes a practical random number or hash.
