☐ **Control Flow**
if-then-else and else-if statements
comparison operators
logical operators
switch statements

☐ **JavaScript Bitwise Operators**
&, |, ^, ~
and, or, xor, not

☐ **Sandbox JavaScript Environments**
codepen.io: the best one, but pay to play at the pro level
           best because it isn't too heavily loaded
           and is reasonably clear to code in.
jsfiddle.net: the first and formerly the best
           free and as a consequence, oversubscribed
           clear to code in when its working
           horrid-to-use when overloaded
jsbin.com: clunkier user interface than above two
           free-mode and pro-mode for $
scrimba: fantastic, includes real-time instruction
w3schools.com: Most comprehensive, really well done.
codesandbox.io: Reasonably complete, github connected.
           Uses parcel to package {html, css, js}
codecademy.com: Rigid pedagogy, hell on wheels  if you try
           something different than it wants.
